OBJECTIVE

Computer Science undergraduate with hands-on experience building AI-powered workflow automation using n8n, Python, and REST APIs — integrating LLMs, enrichment APIs, and CRM/notification tools into production-grade GTM, growth, and product pipelines. Seeking Automation Engineer / GTM & Product roles where AI-driven automation is core to the job.

EDUCATION

Pranveer Singh Institute of Technology, Kanpur B.Tech in Computer Science Engineering	Oct 2023 – Present CGPA: 7.9
The Pillars Public School, Gorakhpur Class X & XII (CBSE)	2020 – 2023

SKILLS

Programming Languages: Python, Java
Workflow & Process Automation: n8n, REST API Integrations, Webhooks, LLM-based Data Parsing (OpenAI/OpenRouter/Claude), Google Calendar & Sheets API, Slack API
GTM & Growth Tooling: Clay, Apollo.io, Airtable, Typeform, Segment/Mixpanel-style event scoring
QA & Test Automation: Selenium, Python Automation Scripts, Postman, API & Manual Testing
Backend & Tools: FastAPI, Spring Boot, REST APIs, JWT Authentication, Git, GitHub, Docker
Databases: MySQL, PostgreSQL
Certifications: HackerRank Python (Basic) Skills Certification

EXPERIENCE

AskAutomator — Flutter Developer Intern Mar 2026 – May 2026

- Developed and maintained scalable cross-platform mobile applications, integrating and testing REST APIs via Postman.
- Debugged application issues and collaborated with backend developers to resolve defects.
- Improved application performance and ensured stable releases through structured testing.

PROJECTS

HireFlow.ai — Growth-Automation Case Study [\[GitHub\]](#)

- Built an n8n pipeline that discovers open GTM/Growth/RevOps roles, enriches company & hiring-manager data via Clay and Apollo.io, and drafts personalized outreach with an LLM (Claude) — generating 11 interviews from 76 outreach notes (35.5% reply rate).
- Added a second workflow that scores inbound product-usage events into PQLs for PLG teams, and a Next.js/TypeScript dashboard visualizing the full funnel.
- **Tech:** n8n, Clay, Apollo.io, Claude LLM, Airtable, Postgres, Next.js, TypeScript

n8n Shift Manager [\[GitHub\]](#)

- Built a multi-workflow n8n system that generates weekly staff schedules under availability, rest, and consecutive-day constraints, and lets employees self-serve shift issues via Slack slash commands.
- Used an LLM to classify employee-reported issues as routine (auto-resolved) vs. conflict (escalated to a manager via interactive Slack buttons), with dedicated error-handling and weekly conflict-analytics sub-workflows.
- **Tech:** n8n, Anthropic API, Slack API, Google Sheets API, Docker

n8n Lead Qualifier [\[GitHub\]](#)

- Built an AI-powered lead qualification workflow: form submissions enriched with company data, scored by an LLM, and logged to a CRM sheet, with hot leads routed to Slack.
- Added a dedicated error-handler sub-workflow via n8n's workflow-level error handling for resilient, production-grade automation.
- **Tech:** n8n, Typeform, Abstract API, OpenRouter (LLM), Google Sheets, Slack API

n8n Meeting Scheduler / Calendar Concierge [\[GitHub\]](#)

- Built an end-to-end n8n workflow converting inbound meeting requests (form or parsed email) into fully booked Google Calendar events with zero manual intervention.
- Queried Google Calendar's Free/Busy API for slot-finding and auto-booking, plus a 3-stage delayed reminder sequence (24h, 30min, post-meeting) via n8n's Wait node.
- **Tech:** n8n, Google Calendar API, Gmail API, LLM parsing, Docker

JobWatch — Automated Job Monitoring System [\[GitHub\]](#)

- Built an automated system that scrapes Internshala for user-specified roles, with database-based deduplication to avoid duplicate alerts.
- Automated real-time WhatsApp job alerts using n8n and WhatsApp.js workflows.
- **Tech:** Python, FastAPI, n8n, WhatsApp.js, SQL, Selenium
